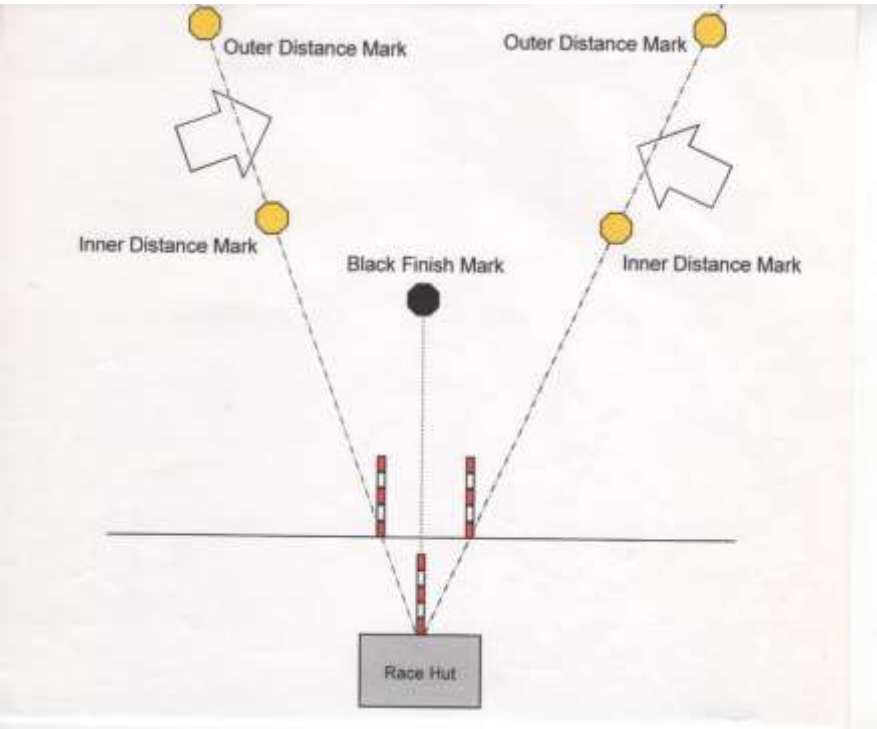
SETTING THE SHORE START LINE



- Set the white Outer Distance Mark (ODM) 75 metres or more from the shore
- Move the shore line pole to line up with the race box mounted pole and the ODM. This sets the transit for the start line. If the ODM drifts more than two metre to leeward from the transit, reposition the shore pole to line up.
- The start line is defined as a transit of the two shore based poles, the ODM is purely a guide to being on the transit. Do not set a line with the ODM to windward, if you do you will almost certainly have General Recalls.
- Set the white Inner Distance Mark (IDM) OUTSIDE the Black Finish Mark. This will enable a second fleet start before the first fleet have finished. Useful in the winter months to reduce crew waiting time.
- The Black Finish Mark should be inside IDM set square to and directly in front of the race box.
